PRODUCT INFORMATION

Mobile Units

Our mobile units have a very unique, innovative and fully patented design that allows the props to open and close, from the traveling position to the training position, with the use of two heavy-duty hydraulic cylinders. Mobile FireVent units are much more than just ventilation props; they are multi-discipline training units. There are three base model units that can be customized and configured with numerous options to meet your department's needs

Stationary Units

Our stationary units are an excellent addition to a planned or established training center. Each stationary unit is extremely heavy duty and well made. They are custom-built at the time of order with the same high-quality materials and craftsmanship as the mobile units. The stationary units are designed and engineered in a modular fashion to enable ease of shipping and erecting on site. Stationary units can be placed and secured on a slab or footing style foundation

Auto-X Simulator

The Auto-X Simulator is excellent for entry-level learning (academy setting) or first-time exposure to the extrication tools (hydraulic spreaders, cutters, ram and sawzall, rotary saw, and rescue strut). The Auto-X allows for the safe use and operation of the tools in a controlled environment, with predictable results, and enables high repetition (lots of tool time) for students to gain confidence and understanding of the tools, making time spent with acquired vehicles far more productive.
